## Amendments to the Claims

The listing of claims will replace all prior versions, and listings of claims in the application.

1. (Currently Amended) A method, comprising:

utilizing at least one generic software component to develop a specific voice application, including accessing in a development environment a generic dialog asset from a remote central repository via a remote repository interface;

deploying the specific voice application including the generic dialog asset in a deployment environment separate from the development environment, wherein the deployment environment includes an instance of provides remote-streaming runtime access to the remote central repository; and

invoking in the deployment environment, at runtime, the generic dialog asset from the instance of the remote central repository.

- 2. (Original) The method recited in Claim 1, wherein the deployment environment further comprises a voice gateway.
- 3. (Original) The method recited in Claim 1, wherein the deployment environment further comprises an application server.
- 4. (Original) The method recited in Claim 1, wherein the deployment environment further comprises a dialog control component.

- 5. (Original) The method recited in Claim 1, wherein the deployment environment further comprises a dialog component.
- 6. (Original) The method recited in Claim 1, wherein the deployment environment further comprises a voice application services layer.
- 7. (Original) The method recited in Claim 1, wherein the deployment environment further comprises a rules integration layer.
- 8. (Original) The method recited in Claim 1, wherein the deployment environment further comprises a messaging layer.
- 9. (Original) The method recited in Claim 1, wherein the deployment environment further comprises a voice services layer.
- 10. (Original) The method recited in Claim 1, wherein the deployment environment further comprises a detail tracking layer.
- 11. (Original) The method recited in Claim 8, wherein the deployment environment further comprises an external system.
- 12. (Original) The method recited in Claim 2, wherein the voice gateway further comprises a voice interpreter.

- 13. (Original) The method recited in Claim 2, wherein the voice gateway further comprises a telephony interface.
- 14. (Original) The method recited in Claim 2, wherein the voice gateway further comprises a text-to-speech service.
- 15. (Original) The method recited in Claim 2, wherein the voice gateway further comprises an automatic speech recognition service.
  - 16. (Original) The method recited in Claim 1, wherein:

utilizing one or more generic software components to develop a specific voice application further comprises utilizing one or more generic software components during a design phase to develop a specific voice application.

- 17. (Original) The method recited in Claim 16, wherein the design phase further comprises a dialog design phase.
- 18. (Original) The method recited in Claim 16, wherein the design phase further comprises a voice coding phase.
- 19. (Original) The method recited in Claim 16, wherein the design phase further comprises a rules definition phase.

- 20. (Original) The method recited in Claim 16, wherein the design phase further comprises a phase wherein custom prompts are generated.
- 21. (Original) The method recited in Claim 16, wherein the design phase further comprises a phase wherein custom grammars are developed.
- 22. (Original) The method recited in Claim 16, wherein the design phase further comprises a phase wherein standard prompts are utilized to generate the specific voice user interface.
- 23. (Original) The method recited in Claim 16, wherein the design phase further comprises a phase wherein standard grammars are used to generate the specific voice user interface.
- 24. (Original) The method recited in Claim 16, wherein the design phase further comprises a system test phase.

## 25-35. (Canceled)

36. (Previously Presented) The method recited in Claim 1, wherein invoking in the deployment environment includes streaming the generic dialog asset from the remote central repository.

37. (New) A deployment environment for a voice application, comprising:

a remote central repository comprising a generic dialog asset, wherein a generic software component is used to develop the voice application which accesses the generic dialog asset via a remote repository interface; and

a processor to process the voice application through a method comprising:

accessing the remote central repository at runtime through remotestreaming; and

invoking, at runtime, the generic dialog asset from the remote central repository.

38. (New) A development environment for a voice application, comprising:

a remote central repository comprising a generic dialog asset, wherein the voice application in a deployment environment accesses the remote central repository at runtime through remote-streaming, and invokes, at runtime, the generic dialog asset from the remote central repository;

a remote repository interface; and

a generic software component used to develop the voice application, which accesses the generic dialog asset via the remote repository interface.
